

IMAC 5K 2017

The iMac 5K 2017 functions as the Universal Display for real-time monitoring and governance control in the MoHead Project. Its high-resolution screen allows for simultaneous display of multiple dashboards.

Specifications:

- 27-inch Retina 5K display, 48 GB DDR4 RAM, 1 TB Fusion Drive.
- Multi-application layout for governance, orchestration, and node health.

Roles:

- Visualization – Consolidated metrics and governance events.
- Control Interface – Governance voting panels and orchestration controls.
- Monitoring – Alert recognition and escalation.

Accessibility & Layout:

- High-contrast mode, scalable UI fonts, and color-blind safe palettes.
- Dashboard layout: governance top, golden signals left, node health right, alerts bottom.

Governance Integration:

- UAL logging for all commands and governance interactions.

KPIs:

- Operator response time to alerts.
- Decision-making efficiency improvement.

Testing Objectives:

- Validate dashboard usability under heavy data load.
- Assess visual clarity in various lighting conditions.

Cross-References:

- See 'Command Center' for operational context.
- See 'Governance Overview' for displayed governance data.
