

MACBOOK PRO 2019

The MacBook Pro 2019 serves as the 'Daily Driver' in the Monkey Head Project, acting as the primary development and orchestration platform for Huey's AI/OS and supporting infrastructure.

Key Specifications:

- 2.3GHz 8-core Intel i9-9880H processor for high-performance computing tasks.
- 32GB DDR4 RAM for handling multiple virtual environments and large datasets.
- 1TB M.2 SSD for fast data access and storage of project assets.

Primary Roles:

- Software Development – Coding, testing, and deployment of Huey's AI modules and governance tools.
- Orchestration Management – Running Docker and Kubernetes to coordinate distributed workloads.
- Data Analysis – Processing performance metrics and simulation outputs for optimization.

Operational Advantages:

- Portability – Enables on-site development and testing in various operational environments.
- High-Performance Hardware – Balances processing power and mobility for flexible use.
- Connectivity – Thunderbolt 3 ports and networking support for rapid integration with Huey's systems.

Governance Integration:

- All deployments and updates from this system are logged in the Unified Audit Log.
- Governance approval required for changes to production systems executed from this device.

Testing Objectives:

- Validate stability under simultaneous container orchestration and AI workload management.
- Measure resource allocation efficiency for different project tasks.
- Ensure compatibility with hardware accelerators and external systems.
