

MACBOOK PRO 2012

The MacBook Pro 2012 serves as a dedicated 'Transmitter' system in the Monkey Head Project, providing essential connectivity with legacy hardware and ensuring compatibility across generations of technology.

Key Specifications:

- Dual-Core Intel Core i5-3210M (2.5 GHz) processor.
- 16GB DDR3 RAM for improved multitasking over the base configuration.
- Dual-Drive Setup – 500GB HDD and secondary SSD via optical bay caddy.

Primary Roles:

- Legacy System Compatibility – Interfaces with older computing platforms and peripherals.
- Cross-Platform Testing – Runs macOS High Sierra and Windows 11 Pro for Workstations.
- Peripheral Integration – Maintains connections with industrial devices and specialized hardware.

Operational Advantages:

- Retains older ports such as FireWire 800 and Thunderbolt for maximum compatibility.
- Acts as a bridge between legacy equipment and modern Huey infrastructure.
- Supports dual-boot for flexible environment testing.

Governance Integration:

- Ensures legacy compatibility testing is documented in the Unified Audit Log.
- Changes to supported hardware are reviewed and approved under governance protocols.

Testing Objectives:

- Verify stability when interfacing with older hardware protocols.
- Evaluate cross-platform interoperability with Huey's ecosystem.
- Measure performance when managing legacy tasks alongside modern operations.
